No action required	Immediately, must remove ring from body	Immediately, must remove patch from body	Immediately, stop taking pills	Immediately, no action required

Only the condom protects against STIs and HIV. Talk with your provider about the best method for you.

Contraceptive Method Considerations & Benefits of Use

BENEFITS OF USE

IUD (NON-HORMONAL)

This method can be kept private and works as emergency contraception.

IUD (HORMONAL)

This method can be kept private and may help relieve heavy, painful periods.

IMPLANT

This method can be kept private and may help relieve heavy, painful periods.

SHOT

This method can be kept private and improves some of the symptoms of periods, like cramping.

RING

This method allows you to control when you get your period and may make periods shorter and lighter.

PATCH

This method allows you to control when you get your period and may make periods shorter and lighter.

PILL

This method allows you to control when you get your period and may protect against heavy periods, cramping and acne.

CONDOM

This method protects against STIs if used every time and is easily accessible.

USE OF EMERGENCY CONTRACEPTION

Keeping up with your birth control can be challenging at times. If you forget your birth control or have an emergency, there may still be time to prevent a pregnancy. Emergency contraception is a safe and effective way to prevent a pregnancy after having unprotected sex. If you feel that you need added protection against pregnancy, talk to your local pharmacist or healthcare provider about emergency contraception.

FOLLOW-UP CARE

If you experience any problems with your birth control method or have follow up questions, contact your healthcare provider.

MEDICAL ELIGIBILITY

While birth control is safe, not every method is right for every woman. Your provider will review your medical history and help you choose the method that is safest for you.

NEED MORE INFORMATION?

If you want to learn more about a method, check out one of the below resources:
